SUMMARY

Motivated Frontend Developer with a strong foundation in building interactive and responsive web applications using React.js, HTML5, CSS3, and JavaScript. Familiar with DevOps concepts, including version control (Git), basic CI/CD pipelines, and cloud deployment workflows. Proficient in basic Java programming, with an understanding of object-oriented principles. Eager to bridge frontend expertise with foundational DevOps practices to contribute to seamless application development, deployment, and user experience enhancements.

TECHINICAL SKILLS

Languages: HTML5, CSS3, JavaScript, Python, Java, SQL

Tools and Frameworks: Visual Studio 2022, Vs code, React.js

DevOps & Tools: Git, GitHub, GitLab, CI/CD pipelines Jenkins, Docker (basic), Kubernetes (basic), Linux.

Cloud & Databases: AWS (basic), Firebase, MySQL

Soft Skills: Effective communication, active listener, Adaptability, Fast learner.

EDUCATION

Medi-Caps University, Indore 2021-2025

B-Tech: Computer Science Engineering: **CGPA:**7.9

South Indian Cultural Association School No.2, Indore 2021

Senior Secondary – Class 12th, CBSE: **Percentage:** 80.20%

South Indian Cultural Association School No.2, Indore 2019

Secondary – Class 10th, CBSE: **Percentage:** 73.50%

PROJECTS

Task Track Manager Sept-Nov 2024

Key skills: React.js, HTML5, CSS3, Git, GitHub Actions, Docker

- A simple task management web application to create, update, and delete tasks. The project includes a responsive frontend built with React.js and basic DevOps practices for automation.
- Set up a CI/CD pipeline using GitHub Actions to automate testing and deployment of the React app. Containerized the application using Docker for consistent development and production environments.

Secure Image Encryption-using AES and SHA-256: “A Hybrid Approach ” Mar-April 2024

Key skills: Java, AES, SHA-256, Cryptography

- Image encryption using AES (Advanced Encryption Standard) involves converting the image data into ciphertext using a symmetric key. SHA-256 (Secure Hash Algorithm 256-bit) is used to generate a unique hash of the original image, ensuring integrity and authenticity. Together, they provide secure and verifiable image encryption and decryption.
- The significance of using AES for image encryption and SHA-256 for hashing lies in their combined ability to ensure data confidentiality, integrity, and authenticity. AES secures the image from unauthorized access, while SHA-256 verifies that the image has not been tampered with, offering robust protection in digital communications.

CERTIFICATIONS

AWS Academy Graduate - AWS Academy Cloud foundation and Architecting June 2024

Completed the AWS certification, which deepened my skills in designing secure, scalable, and cost effective cloud architectures on AWS. It covered key areas like high availability, networking, and data management, enhancing my ability to architect and deploy robust systems in the cloud.

"Learning Python: The Complete Python Programming Course" Udemy-2022

Completed acquiring comprehensive skills in Python programming and enhancing problem-solving abilities and

proficiency in python development.

WORKSHOPS/EVENT

Google Cloud Study Jam

Sept-Oct 2023

Acquired skill: Generative AI, Cloud

The Google Cloud Study Jam is an engaging, hands-on learning event designed to introduce you to the world of Google Cloud technologies. Throughout the event, we participate in practical labs and guided tutorials, gaining valuable experience with cloud computing services such as data storage, machine learning, and application deployment. Also earned badges and certifications.

ADDITIONAL

LANGUAGES: English, Hindi

INTERESTS: Calligraphy, Sketching
